Broken relationships | normal correlation 0.4

Construction diagnostics | seed 100 | all 10,000 rows | 20 features

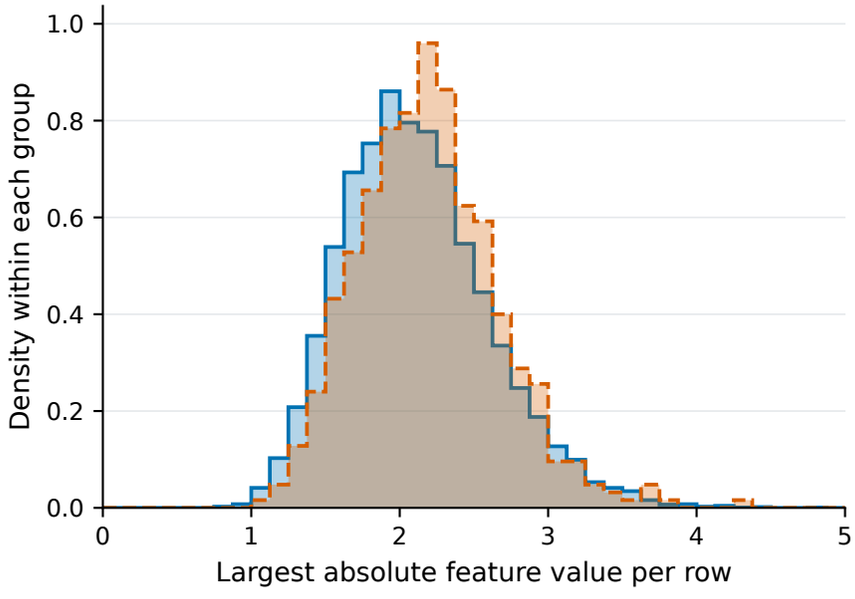

Normal origin (9,500 rows) Positive origin (500 rows)

Individual feature distributions match in the population; positive features are independent.

A | Two example features

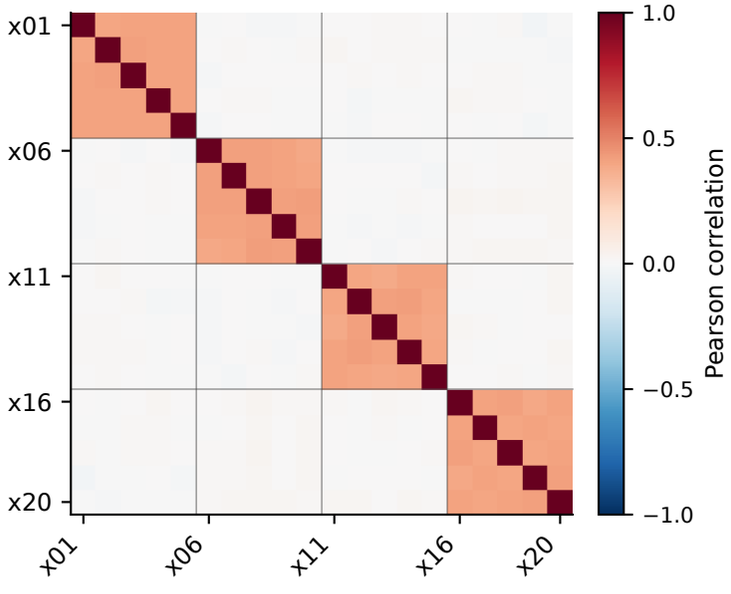

B | Extremeness across all 20 features

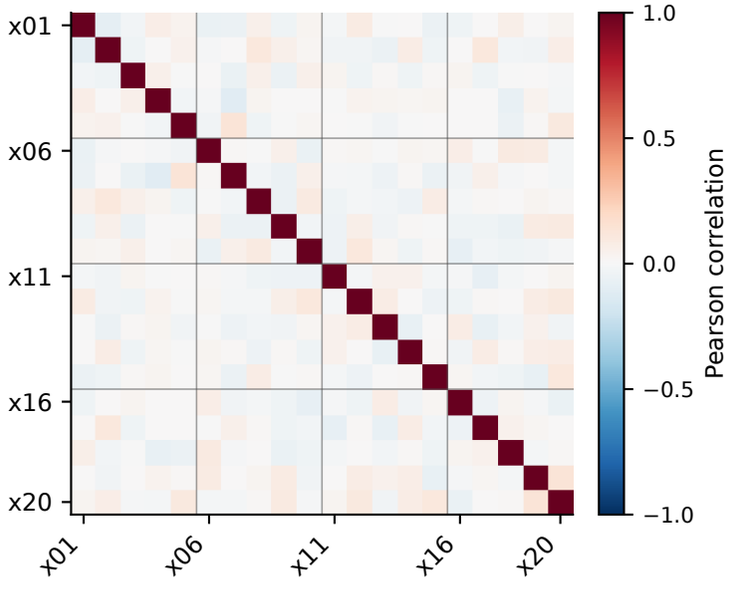

C | Normal origin correlations

Within-block mean 0.401; target 0.400

D | Positive origin correlations

Within-block mean 0.002; target 0.000

Shared scales within each family | Histogram is a construction summary | No models fitted
